

THANK YOU

for purchasing a DustShield™

TABLE SHIELD

Setup is a SNAP and only takes a minute!

Step 1. Place the slotted panel upright on the table surface. Line the tabbed panel together with the slots as shown here. *Tabs should go through the slots.*

Step 2. Place the remaining panel on the other side of the assembly and line up the holes with the tabbed panel.

Step 3. Attach panels together with included zip ties. *Snip off excess length.*

Step 4. Place one black plastic support under each outer edge of the of the table partition. Each support has a slot for the polycarbonate sheet to sit in, and prevent movement. Do not add supports to the middle of the table.

**SLOTTED
SIDE UP**

Place a small piece (1" square) of the included double sided tape under each foot to secure.

Additional Partitions. Partitions sold with more than 4 compartments are easily daisy-chained together using the same process in steps 1-3.

After you setup the first set of partitions, repeat step 1 to line the next tabbed panel together with the slots, then continue adding on with steps 2-3.

Maintenance. Clear Polycarbonate is easy to clean with a soft cloth, and a simple alcohol solution, or soap and water. *Never use abrasives, or solutions containing ammonia.*
